

GÖRKEM EROL

SENIOR FULL STACK & PRODUCT ENGINEER

westdabestdb@gmail.com | github.com/westdabestdb | westdabestdb.com

PROFILE

Senior Full Stack / Product Engineer (9+ years) with a proven track record as a **Founding Engineer at an enterprise security platform** and as the **sole engineer behind a new country expansion** for a product operating across 4 countries. Takes **full product ownership**: defines scope, drives architecture, **leads and manages engineering teams**, and is accountable for what ships. Has built cross-platform mobile apps, backend systems, Web3 platforms, and internal tooling used by **tens of thousands of active users across multiple countries**. Experienced across mobile, full stack, and blockchain, now focused on **AI-first development and scalable product infrastructure**. Works best in teams that move fast and take **strong ownership** over what they build.

PROFESSIONAL EXPERIENCE

Senior Software Engineer, Flovi

May 2025 to Present

Finland, Remote

- **Leading Flovi's Spain market expansion as the sole engineer**, building the Flutter app and full backend infrastructure for a new country from scratch, owning every technical decision along the way.
- **Built the driver acquisition funnel**, the web app that handles new driver onboarding and feeds the company's growth pipeline in new markets.
- **Shipped full-stack features** across the Laravel backend and Flutter mobile app for the Driver Squad product, working across the whole stack week to week.
- **Built AI-powered internal tooling** to automate manual workflows, cutting overhead and freeing up the ops team to focus on higher-value work.
- **Introduced AI-first development practices** across the team, integrating LLM-assisted tooling into the build process to ship faster and keep quality consistent.

Senior Software Engineer, 4Human

Feb 2024 to Feb 2025

Norway, Hybrid

- **Architected a cross-platform Flutter HRM application** from zero to App Store launch in under 6 months, onboarding **10,000+ users within the first 3 months**, beating the initial growth target by 3x.
- **Built and led a team of 4 engineers**, introducing code review standards and clearer task ownership that sped up delivery and cut review wait times.
- **Automated the full build and release pipeline** via CodeMagic and GitHub Actions, reducing deployment time from hours to minutes and enabling continuous delivery with zero manual intervention.

Founding Engineer, Lupasafe

May 2020 to May 2025

Netherlands, Remote

- **Built Swift-based iOS and macOS security applications** as Founding Engineer, growing the product to **20,000+ active users**, serving enterprise clients including **Mastercard**, and cutting security vulnerabilities by **70%** through advanced cryptographic protocols.
- Architected **RSA asymmetric encryption for data protection**, eliminating an entire class of attack vectors, reducing security-related support tickets, and meeting full GDPR compliance across a Fortune 500 client base.
- **Refactored the Swift & SwiftUI codebase** around modular architecture patterns, cutting infrastructure costs and shipping features faster with fewer production defects.

Senior Software Engineer, Blocklords

Mar 2021 to Aug 2023

Singapore, Remote

- **Designed a high-throughput blockchain architecture** on Ethereum Layer 2, scaling the platform to **50,000+ active users** while optimizing smart contract execution and transaction batching to reduce gas costs and deliver faster, cheaper on-chain interactions.
- **Built and scaled a Web3 marketplace and IDO platform** to 30,000+ users using Nest.js, PostgreSQL, and Web3.js, with on-chain features that drove higher transaction volume and platform revenue.
- **Led a team of 5 engineers** across multiple concurrent blockchain workstreams, keeping code quality high and shipping on time.

Software Engineer, Fonesoft

Feb 2020 to Nov 2020

USA, Remote

- **Delivered Jira Service Desk and SuiteCRM integrations** for enterprise clients, improving support operations and lifting customer satisfaction scores and Net Promoter Score (NPS).
- **Developed a production-grade QuickBooks integration plugin** in JavaScript and PHP, automating financial data reconciliation and saving accounting teams hours of manual work per week.
- **Extended SuiteCRM's payment processing capabilities** with custom-built modules, improving cross-team payment workflows and increasing platform operational efficiency.

Software Engineer, Visitu

Mar 2019 to Feb 2020

USA, Remote

- **Shipped production iOS and Android applications** in Flutter from a single unified codebase, reaching thousands of active monthly users across both platforms.
- **Built platform-native API bridges** in Java (Android) and Objective-C (iOS) for real-time communication with peripheral hardware, resulting in lower connection latency and higher device reliability.
- **Designed and implemented a custom Bluetooth Low Energy (BLE) protocol module** from scratch, enabling device pairing and data synchronization while reducing connection latency.

EDUCATION

University of Manitoba

Bachelor's Degree of Computer Science

AREAS OF EXPERTISE

- | | | | |
|---------------------------|--------------------------|------------------------|-------------------|
| • JavaScript / TypeScript | • Angular | • React / Next.js | • Flutter |
| • Node.js / Express.js | • Laravel | • GraphQL | • Swift / SwiftUI |
| • Solidity / Web3 | • Ethereum Layer 2 | • PostgreSQL / MongoDB | • Prisma ORM |
| • AWS | • GitHub Actions CI/CD | • Rust | • Docker |
| • LLM Integration | • AI Workflow Automation | • Prompt Engineering | • Agentic AI |

CERTIFICATIONS

APIs and Microservices Certification, 300-Hour Program

freeCodeCamp

JavaScript Algorithms & Data Structures Certification, 300-Hour Program
